

Date:

Wednesday Challenge Form

Group Members: Team MegaForce

Problem Statement: We had to make a triangle
Out of straws and using anything to make it
A perfect triangle (90 degree on edges)

Approach: What we did is we decided to make
Holes on the edges so we stuck each straw into
Another to keep it together.

Solution: The triangle decided to fall apart
When being measured.

Lessons Learned: we should have added something
to support the triangle.
